Prone Positioning Cushion Birdy

Our prone positioning cushions support the infant in a position that is oriented towards the body's centre line and promote a better balance between the flexor and extensor muscles. The cushion is shaped to support the natural curvature of the shoulders, hand-mouth coordination and optimum alignment of the head and body.

The little patients thus achieve a relaxed, flexed position without exerting too much pressure on the knees and elbows. Cut-outs on either side of the prone-positioning cushion allow the baby's bent arms to rest. The support provided to the pelvis makes it easier to pull up the legs. Available in four different sizes the birdy™ prone-positioning cushion is the ideal complement to our comfy™ positioning nest.

- + Available in four sizes: XS < 800 g, S > 800 g - 1.200 g M > 1.200 g - 2000 g, L > 2.000 g
- + A viscoelastic memory foam in the cushion's core assures optimum pressure relief
- + The PU-coated face material provides an aseptic closure of the cushion and is suitable for use of clinical disinfectant wipes
- + The textile cover made of a fine, soft microfibre/cotton mix prevents skin irritations and can be pulled over the cushion with ease
- + Washable up to 95 °C and suitable for tumble-drying
- + Compatible with comfy™ positioning nest
- + Tested and certified according to Oeko-Tex® Standard 100
- + Made in Germany
